PROFESSIONAL SUMMARY

Computer Science Engineering undergraduate with hands-on experience in Python, Machine Learning, Computer Vision, and NLP. Experienced in developing OCR-based accessibility tools and AI-powered recommendation systems using Scikit-learn and OpenCV. Skilled in data preprocessing, feature engineering, model development, MySQL, and SQLite, with a strong foundation in Data Structures, Algorithms, and problem-solving.

EDUCATION

Bachelor of Engineering, Computer Science and Engineering Sep 2023 – Apr 2027

Vel Tech High Tech Dr. Rangarajan Dr. Sakunthala Engineering College, Chennai |

CGPA: 8.41 (through 5th semester)

Higher Secondary Education (Class XII) 2023

Velammal Vidyalaya, Chennai | 84%

Secondary Education (Class X) 2021

Maharishi School of Excellence, Chennai | 78%

TECHNICAL SKILLS

Languages: Python, Java (Fundamentals)

Web: HTML5, CSS3

AI/ML: Machine Learning, Supervised Learning, Neural Networks, NLP, Computer Vision, OCR

Libraries: Scikit-learn, OpenCV, PIL

Databases: MySQL, SQLite

Tools: Git, GitHub, VS Code

Core: Data Structures & Algorithms, Data Analysis, Problem Solving.

WORK EXPERIENCE

Data Analyst Intern — Metec Design and Construction Engineers India Pvt. Ltd. Chennai, India | Jun 2025 – Jul 2025

- Supported data organization and structured data management processes to maintain accuracy and consistency across records.
- Collaborated with cross-functional teams in group discussions and problem-solving sessions to address operational data needs.
- Strengthened analytical thinking, professional communication, and teamwork skills within a corporate engineering environment.

TECHNICAL PROJECTS

Text-to-Speech and Optical Character Recognition System

Python, OpenCV, PIL, OCR, NLP

Built a Python-based system integrating OCR and NLP to extract and interpret text from images, then converted it to speech using real-time speech synthesis — improving content accessibility for visually impaired users.

AI-Powered Career Guidance System

Python, Machine Learning, NLP

Developed a machine learning recommendation system that analyzes user inputs and questionnaire data using NLP and feature extraction to generate personalized, data-driven career path suggestions.

Smart Land Intelligence System

Python, Streamlit, RandomForest Classifier

Built an AI-based crop recommendation web app using a Random Forest Classifier to analyze soil, weather, and rainfall data, with integrated profit estimation and risk analysis for real-time farming decisions.

CERTIFICATIONS

- The Joy of Computing Using Python — NPTEL (2024)
- Web Development Fundamentals — IBM SkillsBuild (2026)
- Junior Cybersecurity Analyst — Cisco Networking Academy (2026)
